REAL-TIME SYSTEMS - UNLP

A real time system is a system that must satisfy explicit (bounded) response-time constraints or risk severe consequences, including failure. Definition (Real time system) A real time system is one whose logical correctness is based on both the correctness of the outputs and their timeliness. Definition (Real time system) A real time system is ...

"This book is a comprehensive text for the design of safety critical, hard real-time embedded systems. It offers a splendid example for the balanced, integrated treatment of systems and software engineering, helping readers tackle the hardest problems of advanced real-time system design, such as determinism, compositionality, timing and fault management.
