Workstations, printers, servers and automation equipment can attach to any of these switch ports. If more LAN ports are needed, external switches can be cascaded to any switch port on the switch-router. The one remaining Ethernet port is not part of the switch fabric. It is called a WAN port for wide-area-network.

If that network uses private IP addresses, the NAT router needs a very large set of registered IP addresses. With static NAT, for each private IP host that needs Internet access, you need a publicly registered IP address. Overloading allows NAT to scale to support many clients with only a few public IP addresses.
