Sediment transport primer: estimating bed-material transport in gravel-bed rivers. Gen. Tech. Rep. RMRS-GTR-226. Fort Collins, CO: U.S. Department of Agriculture, Forest Service, Rocky Mountain Research Station. 78 p. Abstract This primer accompanies the release of BAGS, software developed to calculate sediment transport rate in gravel-bed rivers.

CHAPTER 13 THE SEDIMENT TRANSPORT RATE INTRODUCTION 1 By the sediment transport rate, also called the sediment discharge, I mean the mass of sedimentary material, both particulate and dissolved, that passes across a given flow-transverse cross section of a given flow in unit time.

between sediment supply and sediment transport rates in stream channels governs bed scour and aggradation, channel topography and flow patterns, and the subsequent erosion and construction of bars, bends, banks, and floodplains.

## **1. Why estimate sediment transport? - NCALM LiDAR Data**

Capacity transport is the competence-limited sediment transport (mass per unit time) predicted by all sediment-transport equations, examples of which we will examine below. Capacity transport only occurs when sediment supply is abundant (non-limiting). Sediment supply refers to the amount and size of sediment available for sediment transport.

Quite generally, to estimate sediment transport, we face a (i) sediment problem—“specifying the model and parameter values to estimate incipient motion and transport rate as a function of boundary stress (ii) hydraulics problem—“estimating boundary stress in terms of

rate of sediment transport (see Wilcock et al., 2001, Experimental study of the transport of mixed sand and gravel *Water Resources Research*, 37(12):3349-3358—“increasing sand content from 6 to 21% increased sediment transport by 1 to 3 orders of magnitude for the same water discharge!).

Estimating Sediment Discharge John R. Gray and Francisco J. M. Simões D.1 INTRODUCTION

Sediment-discharge measurements usually are available on a discrete or periodic basis. However, estimates of sediment transport often are needed for unmeasured periods, such as when daily or annual sediment-discharge values are

companion to “Sediment Transport Primer: Estimating Bed-Material Transport in Gravel-bed Rivers” (Wilcock and others 2009). The Sediment System Each of the models used in calculating bed load transport rates has some common data input requirements, these include: • a measured channel cross section (or, at a minimum, an estimate of the bank-
