In computer science, real-time computing (RTC), or reactive computing describes hardware and software systems subject to a "real-time constraint", for example from event to system response. Real-time programs must guarantee response within specified time constraints, often referred to as "deadlines". The correctness of these types of systems depends on their temporal aspects as well as their ...

### **Soft Machines – Some personal views on nanotechnology**

Processor design is the design engineering task of creating a processor, a component of computer hardware. It is a subfield of computer engineering (design, development and implementation) and electronics engineering (fabrication). The design process involves choosing an instruction set and a certain execution paradigm (e.g. VLIW or RISC) and results in a microarchitecture, which might be ...
